

FLUSHING INSTRUCTIONS

- / Put 40-60mls Salt-Attack Marine Engine Flush concentrate in mixer cup for under 90hp motor, and for 90-300hp use 80-100mls to flush your engine, wash boat, trailer, fishing and diving gear.
- / Connect hose to Salt-Attack mixer then attach mixer to flush muffs or flushing port. Set mixer on rinse position and turn on water supply.
- / When using muffs or flush bags start your motor and let it run for 5-10 minutes to allow the thermostat to open.
- / Now push lever forward to Salt-Attack position, you will see bubbles coming out of the exhaust. Give it about 30 seconds to a minute maximum after seeing the foaming action.
- / Turn motor off, then turn mixer to off position. Your motor is flushed. Remove muffs from mixer and connect spray nozzle, set to a misting or fan type spray. Turn mixer back to Salt-Attack position and continue to wash down your boat inside and out, then hard rinse before drying.
- / Wash trailer, axle, trailer brakes, rollers, springs, draw-bar, coupling, mud-guards and wire winch. Don't forget the back underneath of your tow vehicle. Don't rinse Salt-Attack off.
- / **Severe salt blockages, overheating engines and winter maintenance:** Repetitive flushing for 3-5 days in a row will unblock water ways and help protect the engine with advanced corrosion inhibitors and glycol anti-freeze. If overheating persists, the engine will need to be serviced by a marine service centre.

TRAILER FLUSH KIT PLUG AND SPRAY

Rinse sea water, road salt and algae contamination from your brakes, hubs and suspension with Exsalt. Easy to install and permanently fitted, Exsalt will extend the life of your brakes and trailer running gear.

KIT INCLUDES

- 2x Exsalt Six-way Jet Rinse Heads
- 5m High Density Hose
- T-Piece Connector
- Hose Adaptor Mount
- 8x Saddle Mounts
- Hose Clamps
- Cable Ties and Screws to Mount
